Introducing CryptoTrader

What are Cryptocurrencies?

A cryptocurrency is a form of digital asset based on a network that is distributed across many computers.

This decentralized structure allows them to exist outside the control of governments and central authorities.

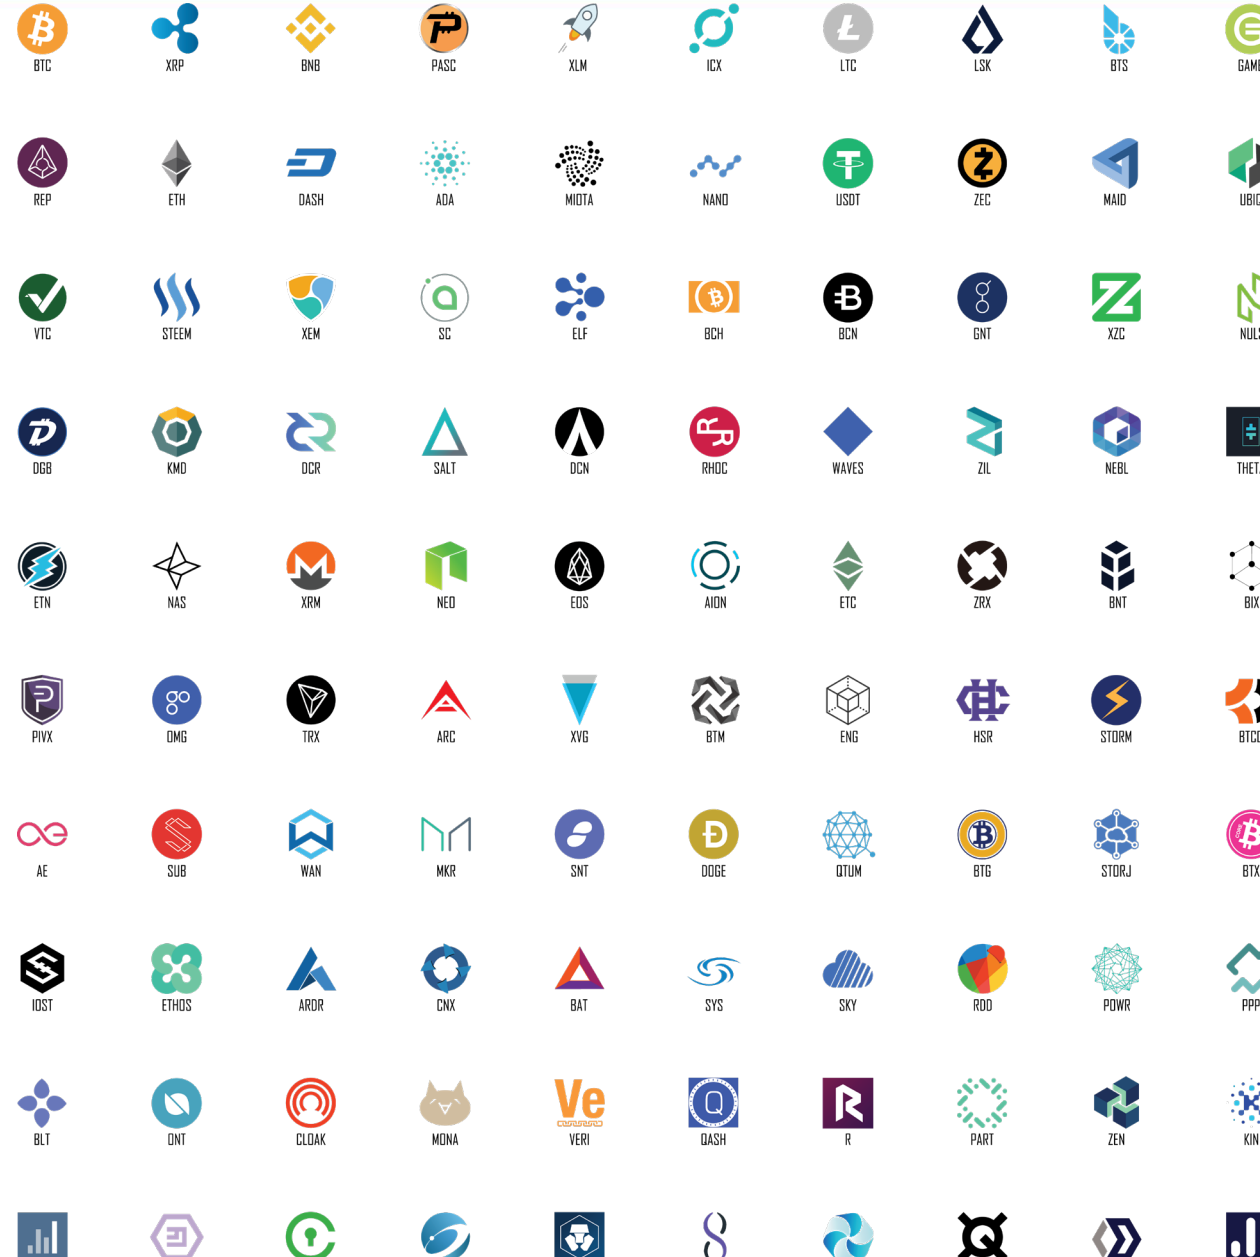

A cryptocurrency is an encrypted data string that denotes a unit of currency; this currency exists digitally and uses cryptography to secure transactions.

Cryptocurrencies do not have a central issuing or regulating authority, instead using a decentralized system to record transactions and issue new units (a blockchain).

Crypto-verse is Huge!

As of January 2022, there are more than 8000 different cryptocurrencies listed across roughly 380 different exchanges.

Typically, only the largest and most popular Cryptocurrencies and Exchanges by market capitalization are in the news.

These coins are not pocket change!

Crypto has a wide range of value that can fit any trading portfolio.

From a SHIBA INU priced at a fraction of a penny (\$0.00002220) up to Bitcoin trading at \$38,091.07.

The Market Never Sleeps

Cryptocurrencies trade 24h a day
365 days a year.

This makes them a great option for
those who are not available to trade
during standard trading sessions.

Big Profits in Crypto

Volatility is Key

Cryptocurrencies volatility is the result of this trading medium still being in a very early stage compared to other investment tools and currencies.

This volatility can lead to incredible gains.

With the right tools.

Cumulative Returns vs SPY (Volatility Matched)

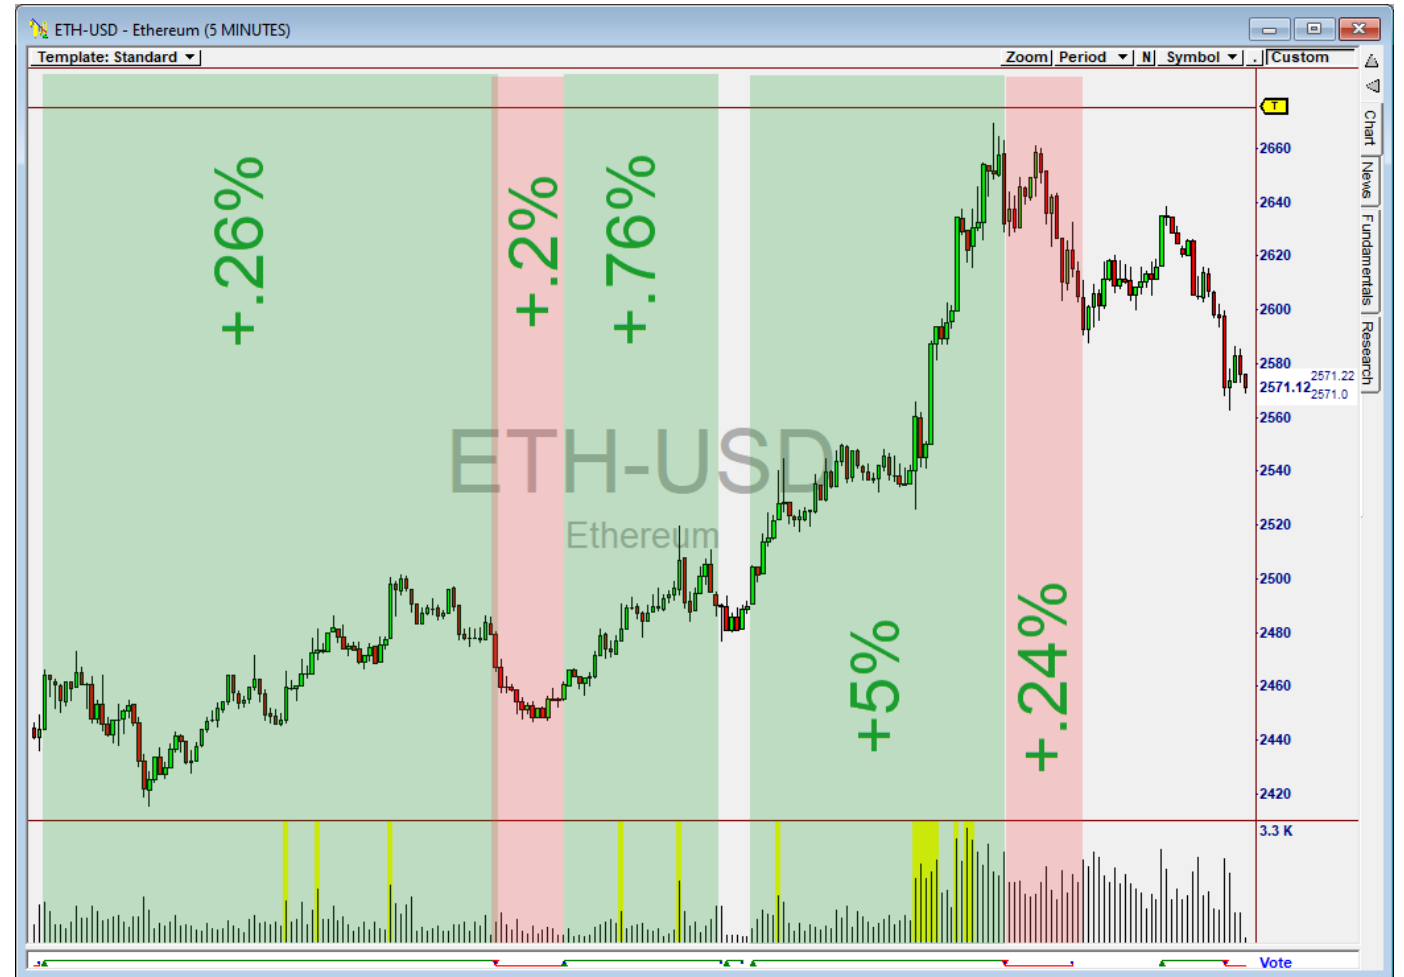

Trade When and How You Want To

The Daily Chart of BTC shows incredible trending moves in both directions.

Trade When and How You Want To
